

Create an App that fetches the data from api endpoint below on load.
<https://658552e2022766bcb8c85fa7.mockapi.io/api/restaurants>.
And store it in localStorage.

- 1- Create screen that display all restaurants.
On longPress show a modal with full details of the restaurants.
On press move to second screen.
On clicking onMap button show the Restaurant marker on map screen using the address from data.

- 2- On second screen display the the dishes available on the restaurants.
On order click add the dish name to Local storage.
- 3- At the bottom of the screen add a button "Place order". Clicking this button fetches data from storage and display the order details on next screen.
